Recent spectroscopic evidence and X-ray crystallographic data has shown that the reaction of 2,1-benzisoxazole-4,5-dione 4-oxime **1** with dimethyl sulfate (or methyl iodide) in DMF and in the presence of potassium carbonate gives [1,3]oxazolo[4,5-*e*][2,1]benzisoxazole **2** and not the previously suggested isoxazolo[3,4-*e*][2,1]benzisoxazole **3**. Details will appear in a subsequent publication.
