

## ERRATA

K. G. DAS, M. MALLAIAH, K. P. MADHUS UDHANAN and A. P. BRUINS: Gas phase reactions induced by  $\text{OH}^-$  ion. *Tetrahedron* **38**, 2285 (1982).

In view of the remarks of Dr. A. P. Bruins (*Tetrahedron* **39**, 23 (1983)), the following clarifications are given.

1. During the collaborative work all the aspects published in the paper were discussed with all the collaborators.

2. The differences in the intensities of  $\text{NO}_2^-$  and  $\text{CN}^-$  ions in the *exo* and *endo* isomers have no stereochemical significance in the absence of knowledge on the mechanism of their formation.

3. Regarding the deuterated amino compounds, the spectra of *exo* and *endo* compounds were rechecked in the Central Drug Research Institute instrument.

4. The ion intensity figures were also rechecked by repeated scanning and averages are reported.

*RR. Labs, India*
