Lanthanum and Some Other Cation-Induced Changes  
in Fluidity of Synaptosomal Membrane Studied  
with Nitroxide Stearate Spin Labels

*J. Membrane Biol.* 27:283

Received 26 October 1976

We have described in pages 284-285, that the oleic acid probe, 9,10-NS has the oxazolidine ring co-planar with that of the alkyl pleat. However, it was found that this probe used in the present experiment was a mixture of *I*(8, 7) and *I*(7, 8), i.e., 9-NS and 10-NS. Therefore, our calculation of the order parameter *S* is also applicable to this probe and our comment given in the parentheses in p. 286 should be disregarded.
