

Announcement

International Symposium on Induced Mutations as a Tool for Crop Plant Improvement

9-13 March 1981, Vienna, Austria;
organized by Food and Agriculture Organization of the United Nations and the International Atomic Energy Agency.

Mutation research is contributing to the genetic resources available to plant breeders for the development of improved cultivars, but it also provides valuable means for research in other fields of plant

science. The Symposium aims at reviewing the achievements towards plant improvement that have been made or could be made through the use of induced mutations as a research tool. The topic will be of interest to agronomists, geneticists, plant breeders, plant physiologists, phytopathologists, taxonomists and others involved in plant research.

Further information may be requested from the IAEA Conference Section or the Scientific Secretary, Dr. Alexander Micke, Joint FAO/IAEA Division, P.O. Box 100, A-1400 Vienna, Austria.
