

## CORRIGENDUM TO "ON ISOMETRIC EMBEDDINGS OF GRAPHS"

BY

R. L. GRAHAM AND P. M. WINKLER

The authors wish to acknowledge the observation of J. Zaks concerning an assertion appearing in *On isometric embeddings of graphs*, this Journal **288**, No. 2 (April 1985), 527–536. In particular, a factor of  $V^2$  was inadvertently omitted from the conclusion of Theorem 4, where  $V$  denotes the  $n$ -dimensional volume of the parallelepiped spanned by the vectors  $\bar{a}_k - \bar{a}_0$ ,  $1 \leq k \leq n$ . Of course, this factor should also be included in the related conclusions of Theorems 5 and 6. When the set  $\{\bar{a}_0, \dots, \bar{a}_n\}$  is generated by a *tree* then  $V = 1$ , and Theorem 4 reduces to (2), as asserted.
