# UNITED STATES PATENT OFFICE.

ALONZO E. YOUNG, OF DORCHESTER, ASSIGNOR TO HIMSELF AND JOHN W. HAINES, OF SOMERVILLE, MASSACHUSETTS.

## CASTER-BOTTLE HOLDER.

Specification forming part of Letters Patent No. **49,841**, dated September 5, 1865.

*To all whom it may concern:*

Be it known that I, ALONZO E. YOUNG, of Dorchester, in the county of Norfolk and State of Massachusetts, have invented an Improved Manufacture of Caster or Caster-Bottle Holder; and I do hereby declare the same to be fully described in the following specification and represented in the accompanying drawings, of which—

Figure 1 is a top view, Fig. 2 a side elevation, and Fig. 3 a transverse section, of it.

The article is made of glass and in one piece by means of a mold, into which it is pressed, so as to impart to it the proper form or structure.

It consists of three or any greater number of cups, A A A, arranged about a connection, B, through the center of which there is a hole or handle-fastening socket, *a*. Projecting from each of the cups is a foot, *b*, the three feet being to support the connected cups, all of which

are arranged so as to project below the connection B. The socket *a* serves to receive and hold a screw-pin, which, on being passed upward through such socket, is to have a handle screwed on it.

The article will answer as a receptacle for different condiments or for supporting bottles containing such. Being cast or pressed into shape in one piece of glass, it constitutes a useful caster for table service.

I claim as my invention or improvement—

In the manufacture of the caster or bottle-holder, made of glass and in one piece, the arrangement of its cups, feet, connection, and handle-fastening socket, as specified.

ALONZO E. YOUNG.
