ROBERT NENNINGER AND FRIEDRICH BRÄUER, OF NEWARK, NEW JERSEY.

Letters Patent No. 112,067, dated February 21, 1871.

IMPROVEMENT IN CURTAINS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern.

Be it known that we, ROBERT NENNINGER and FRIEDRICH BRÄUER, both of Newark, in the county of Essex and State of New Jersey, have invented a new and useful Improvement in Curtains; and we do hereby declare the following to be a full, clear, and exact description thereof, which will enable those skilled in the art to make and use the same, reference being had to the accompanying drawing forming part of this specification, in which drawing—

Figure 1 represents a front view of this invention.

Figure 2 is a horizontal section of the same.

Similar letters indicate corresponding parts.

This invention relates to a curtain which is made of a textile fabric, coated on both sides with a compound made of linseed oil and a suitable pigment, whereby said fabric becomes stiff and impervious to water, so that the same, when secured to the cornice, will readily retain the desired shape or folds, and that, when it becomes dirty, it can be washed off without being taken down.

With the cornice and curtain are combined two corner blocks and a series of parting strips, for the purpose

of forming the folds of the curtain and retaining them in the required position.

The curtain A is made in the form shown in fig. 1 of the drawing, and it is secured to the cornice B, which is provided with corner blocks *a a*, the folds of the curtain being retained in position by parting strips *b b* interposed between them, as shown in fig. 2 of the drawing.

What we claim as new and desire to secure by Letters Patent, is—

The combination of a curtain, made of a textile fabric, coated with a compound of linseed oil and a suitable pigment, with a cornice provided with corner blocks *a*, and with parting strips *b* interposed between the folds of the curtain, substantially in the manner herein shown and described.

This specification signed by us this 16th day of January, 1871.

ROBERT NENNINGER.
FRIEDRICH BRÄUER.
