UNITED STATES PATENT OFFICE.

AUGUST SPERBER, OF WELLSBURG, WEST VIRGINIA, ASSIGNOR TO HIMSELF, DALZELL BROS. & GILMORE, OF SAME PLACE.

GLASSWARE.

SPECIFICATION forming part of Letters Patent No. 305,720, dated September 23, 1884.

Application filed June 7, 1884. (No model.)

To all whom it may concern:

Be it known that I, AUGUST SPERBER, of Wellsburg, in the county of Brooke and State of West Virginia, have invented a new and useful Improvement in Glassware; and I do hereby declare the following to be a full, clear, and exact description thereof.

My invention relates to an improvement in articles of glassware; and it consists in forming a hinge between the body and cover or lid by a lug or lugs formed on the body and lid integral therewith, and a pintle formed of any suitable material passing through holes or cavities in said lugs.

I will now describe my invention, so that others skilled in the art may employ the same, reference being had to the accompanying drawings, forming part of this specification, in which—

Figure 1 is a perspective view of a glass case provided with my improved hinge, and Fig. 2 is a detached view of one of the lugs.

Like letters of reference indicate like parts wherever they occur.

In the drawings, *a* represents the body of a glass box or case, and *b* a lid or cover formed of a like material.

On the rear side of the box *a*, at the upper edge thereof, are formed four lugs or ears, *c*, having a central cavity, *d*, passing through the same.

On the lower edge of the rear side of the lid *b* are formed two similar ears or lugs, *e*, having central cavities or openings, *f*. These lugs *e* on the cover fit between the lugs *c* on the body of the case *a*, and are secured by rivets or pintles *f'*.

The box and lid and the lugs thereon are formed or pressed in a suitable mold by which the lugs are formed integral with the box and lid.

Although I have shown a glass box or case, my improvement may be applied to other receptacles of glassware where a lid is required, such as dishes, &c.

Having thus described my invention, what I claim, and desire to secure by Letters Patent, is—

A covered dish or receptacle formed of glassware, having a lug or lugs formed on the body and lid of the dish, said lugs being provided with a cavity for the reception of a pintle, substantially as and for the purpose specified.

In testimony whereof I have hereunto set my hand this 3d day of June, A. D. 1884.

AUGUST SPERBER.
