Inventor.

UNITED STATES PATENT OFFICE.

GEORGE W. MICHAEL, OF OBERLIN, ASSIGNOR OF ONE-HALF TO S. E. BROOKS AND A. S. BROOKS, OF CLEVELAND, OHIO.

PEN-HOLDER.

SPECIFICATION forming part of Letters Patent No. 346,670, dated August 3, 1886.

Application filed June 12, 1885. Serial No. 168,534. (No model.)

To all whom it may concern:

Be it known that I, GEORGE W. MICHAEL, a citizen of the United States, residing at Oberlin, in the State of Ohio, have invented 5 a new and useful Pen-Holder, of which the following is a specification.

The object of my invention is to make it possible in writing to hold a pen of ordinary form in a holder in a stationary oblique position, and thus to obviate the difficulty often experienced in using all other oblique pen-holders, arising from the fact that all others have the side piece and standard hinged together in such a manner as that the parts soon 10 work loose with using, which makes it difficult to direct the course of the pen. In my pen-holder the side piece and stem are relatively stationary, cannot get out of order, and any common pen may be used in the hold- 15 er; also, in all other oblique pen-holders the side piece is hinged in a slot in the stem, so that in using, when the end of the holder is touched to the ink, (as is apt to happen when dipping the pen into ink,) the ink draws 20 up into the slot in such way as that the finger on the right side of the holder is frequently smeared with ink. With my pen-holder this difficulty is removed, as the slot does not 25 extend through to the right side of the stem.

The drawing hereto attached, and marked 30 Figure No. 1, shows a full view of stem and side piece. The stem is marked A, and the side piece is marked B. The drawing attached marked Fig. No. 2 shows an end view of stem and side piece, and the manner in 35 which they are joined together.

The stem is of wood or other material, with a slot at one end to receive side piece, and side piece is of metal or other hard material, of the shape as shown in the drawings, and 40 the two are fastened together with a rivet, c, as shown on Fig. No. 1. The side piece has a slit or opening, into which a pen may be placed, (indicated by dark line, as shown on Fig. No 2 at point d.) 45

What I claim, for which Letters Patent of the United States should be granted to me, is—

A pen-holder having a stem, A', and an oblique side piece, B, inserted into a slot cut 50 in one side of said stem, but not extending to the other side, thus protecting the fingers from ink, substantially as set forth.

GEORGE W. MICHAEL.
