PENNSYLVANIA.

## EAVES-TROUGH HANGER.

SPECIFICATION forming part of Letters Patent No. 384,985, dated June 26, 1888.

Application filed September 28, 1887. Serial No. 250,945. (No model.)

### *To all whom it may concern:*

Be it known that we, HOWARD T. LAWRENCE and H. ORVILLE LAWRENCE, citizens of the United States, residing at Dushore, in the county of Sullivan, State of Pennsylvania, have invented a new and useful Eaves-Trough Hanger; and we do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the annexed drawings, making a part of this specification, in which—

Figure I is a perspective of the hanger in readiness to be adjusted to the eaves-trough. Fig. II is also a view in perspective of said hanger adjusted to a section of eaves-trough.

The hanger is to be made in sizes to fit all eaves troughs in common use, of galvanized hoop-iron.

Referring to the drawings, Figs. I and II, a strip of iron, A, with a lock turned on each end, is formed to fit and fastened around the trough by a loop, B, which makes a complete

lock. The brace D is used to strengthen and keep the trough in place. E, which is fastened to A and B at F by a rivet, passes up to and over the eaves in an obtuse angle.

We are aware that eaves-trough hangers have been made to fasten around the trough, but we are not aware that the same combination of hanger with the loop-fastening and brace has ever been used.

What we claim as our invention, and desire to secure by Letters Patent of the United States, is—

The herein-described eaves-trough hanger, consisting of the strip A, bent to the form of a trough, with its ends united by a loop, B, as described, the movable brace D, and a suspender, as and for the purpose set forth.

HOWARD T. LAWRENCE.  
H. ORVILLE LAWRENCE.
