Hey guys,

Please find attached all the info that has been provided to us by EDC with respect to the ELEGGUA site. We are still waiting for more complimentary information such as:

- TOPO DRAWINGS WITH:
 1. 69KV LINES INDICATED
 2. DRAINS
 3. GAS PIPES
 1. WATER
 2. SEWERS
- Specs on the 69kV towers (inteconnection point), dimensions, height, etc. Everything needed to calculate the tie in.
- Transmission line capacities
- Sismic zone requirements
- Communication protocols

From our part, we should provide EDC the following info:

- Water requirments for water injection.
- Our layout design should incorporate a fuel pumping station for the trucks to come in and discharge onto the tanks. The layout should include access ways, discharge stations, etc.
- One line diagram in order to verify the protections and communications, etc.

I have also attached the design and work specs we received for La Raisia 1 EPC project. Most of EdC's protocols and requirements are standardized and so I believe this document will be very helpful when in doubt about any issue.

Let me know how else I can help you with.

Regards,

--
