ENCYCLOPÆDIA BRITANNICA

Volume 24

This volume of the Encyclopædia Britannica contains:

A complete Atlas of the World;

An Index to the Atlas of the World;

An Index to Volumes 1 to 23;

A list of contributors to the *Encyclopædia Britannica,* together with the articles contributed by them.

ATLAS

ALL THE POLITICAL AND GEOGRAPHICAL MAPS of the different continents, countries, states, provinces, etc., of the world are brought together in this volume instead of being scattered through the separate volumes. This is an innovation in encyclopaedia-making generally, but one that will, we believe, appeal to all users of the volumes. Probably the chief use of maps is to show the position of a state or city or some geographical feature; and it is certainly to the great advantage of the inquirer to have all maps brought together in the volume with a separate map index, where all names are arranged alphabetically and where the countries and cities carry the latest population figures available. Moreover, the reader of an article on any one country, say the United States, may wish to have the map of that country open before him when he reads the text in the other volumes of the set.

In addition to the political and geographical maps in the volume covering each continent, country and important state or province, there are others which show in colours the physical features, as the height of the land, the depth of the seas. The map of South America, for example, pages 218 and 219, will give the reader a graphic representation of the physical features of that continent; Australia, pages 216 and 217, will show the dominant characteristics which make that country so interesting. A number of other physical maps of equal interest will be noted.

In addition to the political and physical maps included in this volume, there are many historical maps, as those of Ancient Greece and Rome, charts of the campaigns of Napoleon, the American Civil War, World War I, World War II and diagrams of individual battles scattered through the preceding volumes. These naturally accompany the articles they illustrate.

The maps display the beauty, accuracy and good judgment that have made Britannica maps so favourably known everywhere. Needless to say, the maps are modern in every respect and form a complete Atlas of the world.

INDEX TO ATLAS

As noted above, the Atlas Index is separate from the general index to volumes 1 to 23. The names on the maps are alphabetically arranged, and the cities and countries carry the latest population figures available. This Index to the Atlas includes about 100,000 entries and constitutes a complete gazetteer of the whole world.

THE INDEX TO VOLUMES 1 TO 23

Following the Index to the Atlas is the Index to Volumes 1 to 23. A full account of how it was made, and the purposes it fills, will be found on pages 227 and 228. Nothing further need be said here except that the total number of references reaches more than half a million and renders instantly available all the information in the preceding twenty-three volumes of text.

LIST OF CONTRIBUTORS

At the end of this volume is given a complete alphabetical list of the contributors of all signed articles in the set. It includes the titles of the principal articles written by the different contributors. This list supplements the special lists prefaced to the several volumes where biographical information about the contributors is given.

The list speaks for itself and for the work to which the writers have contributed. It contains over 3,800 names of scholars, experts and men of affairs from all countries of the world, each an authority in his field. It is confidently believed that no other single work has ever appeared with a list of equal weight and distinction.

WALTER YUST, *Editor*

ENCYCLOPÆDIA BRITANNICA

II. Index for Vols. 1 to 23

To make full use of this Index it is essential to read the instructions given on pages 227 to 232
