

NAG C Library Function Document

nag_tsa_diff (g13aac)

1 Purpose

nag_tsa_diff (g13aac) carries out non-seasonal and seasonal differencing on a time series. Information which allows the original series to be reconstituted from the differenced series is also produced. This information is required in time series forecasting.

2 Specification

```
void nag_tsa_diff (const double x[], Integer nx, Integer d, Integer ds, Integer s,
                  double xd[], Integer *nxd, NagError *fail)
```

3 Description

Let $\nabla^d \nabla_s^D x_i$ be the i th value of a time series x_i , for $i = 1, 2, \dots, n$ after non-seasonal differencing of order d and seasonal differencing of order D (with period or seasonality s). In general,

$$\begin{aligned} \nabla^d \nabla_s^D x_i &= \nabla^{d-1} \nabla_s^D x_{i+1} - \nabla^{d-1} \nabla_s^D x_i & d > 0 \\ \nabla^d \nabla_s^D x_i &= \nabla^d \nabla_s^{D-1} x_{i+s} - \nabla^d \nabla_s^{D-1} x_i & D > 0 \end{aligned}$$

Non-seasonal differencing up to the required order d is obtained using

$$\begin{aligned} \nabla^1 x_i &= x_{i+1} - x_i & \text{for } i = 1, 2, \dots, (n-1) \\ \nabla^2 x_i &= \nabla^1 x_{i+1} - \nabla^1 x_i & \text{for } i = 1, 2, \dots, (n-2) \\ &\vdots \\ \nabla^d x_i &= \nabla^{d-1} x_{i+1} - \nabla^{d-1} x_i & \text{for } i = 1, 2, \dots, (n-d) \end{aligned}$$

Seasonal differencing up to the required order D is then obtained using

$$\begin{aligned} \nabla^d \nabla_s^1 x_i &= \nabla^d x_{i+s} - \nabla^d x_i & \text{for } i = 1, 2, \dots, (n-d-s) \\ \nabla^d \nabla_s^2 x_i &= \nabla^d \nabla_s^1 x_{i+s} - \nabla^d \nabla_s^1 x_i & \text{for } i = 1, 2, \dots, (n-d-2s) \\ &\vdots \\ \nabla^d \nabla_s^D x_i &= \nabla^d \nabla_s^{D+1} x_{i+s} - \nabla^d \nabla_s^{D+1} x_i & \text{for } i = 1, 2, \dots, (n-d-D \times s) \end{aligned}$$

Mathematically, the sequence in which the differencing operations are performed does not affect the final resulting series of $m = n - d - D \times s$ values.

4 References

None.

5 Parameters

- 1: **x[nx]** – const double *Input*
On entry: the undifferenced time series, x_i , for $i = 1, 2, \dots, n$.
- 2: **nx** – Integer *Input*
On entry: the number of values, n , in the undifferenced time series.
Constraint: **nx** > **d** + (**ds** × **s**).

- 3: **d** – Integer *Input*
On entry: the order of non-seasonal differencing, d .
Constraint: $d \geq 0$.
- 4: **ds** – Integer *Input*
On entry: the order of seasonal differencing, D .
Constraint: $ds \geq 0$.
- 5: **s** – Integer *Input*
On entry: the seasonality, s .
Constraints:
 if $ds > 0$, $s > 0$;
 if $ds = 0$, $s \geq 0$.
- 6: **xd[nx]** – double *Output*
On exit: the differenced values in elements 1 to **nx**, and reconstitution data in the remainder of the array.
- 7: **nx** – Integer * *Output*
On exit: the number of differenced values in the array **xd**.
- 8: **fail** – NagError * *Input/Output*
 The NAG error parameter (see the Essential Introduction).

6 Error Indicators and Warnings

NE_INT

On entry, **s** = $\langle value \rangle$.

Constraint: $s \geq 0$.

On entry, **ds** = $\langle value \rangle$.

Constraint: $ds \geq 0$.

On entry, **d** = $\langle value \rangle$.

Constraint: $d \geq 0$.

NE_INT_2

On entry, $s = 0$ and $ds > 0$: **ds** = $\langle value \rangle$.

NE_INT_4

On entry, $nx \leq d + (ds \times s)$: **nx** = $\langle value \rangle$, **d** = $\langle value \rangle$, **ds** = $\langle value \rangle$, **s** = $\langle value \rangle$.

NE_BAD_PARAM

On entry, parameter $\langle value \rangle$ had an illegal value.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

7 Accuracy

The computations are believed to be stable.

8 Further Comments

The time taken by the routine is approximately proportional to $(d + ds) \times nx$.

9 Example

The example program reads in a set of data consisting of 20 observations from a time series. Non-seasonal differencing of order 2 and seasonal differencing of order 1 (with seasonality of 4) are applied to the input data, giving an output array holding 14 differenced values and 6 values which can be used to reconstitute the output array.
