Solution/Action:

Use a round file to round out the front-panel casting's channel input hole to allow mounting the new attenuator. The new attenuators have a pressed-in BNC connector that requires the round mounting hole. Position the plug-in on its side to keep the metal filings out of the plug-in when filing out the front-panel hole. Use a 0515-0430 mounting screw to mount the attenuator front to the circuit board. A longer screw can damage and short the channel input.
